

**PLEASE SUBSTITUTE THE FOLLOWING NEW CLAIMS FOR THE PREVIOUS CLAIMS HAVING THE SAME NUMBER. A MARKED UP COPY OF CLAIMS SHOWING CHANGES MADE IS ATTACHED HERETO.**

1. (Twice Amended) A nail enamel composition comprising, by weight of the total composition:

10-95% solvent, and

5-95% of a polymer having a glass transition temperature in the range of 5 to 90°

C., obtained by polymerizing at least two different types of monomers wherein one monomer is a nonpolar ethylenically unsaturated monomer and the other monomer is a polar monomer of the formula:

wherein R<sub>1</sub> is H, or a C<sub>1-30</sub> straight or branched chain alkyl, aryl, or aralkyl; and R<sub>2</sub> is COOM wherein M is H; (CHR<sub>1</sub>)<sub>n</sub>OH; (CH<sub>2</sub>CH<sub>2</sub>O)<sub>n</sub>H; (CH<sub>2</sub>)<sub>n</sub>NR<sub>1</sub>; (CHR<sub>1</sub>CONR<sub>1</sub>H) where n is 1-100, and wherein the polar monomer is present at about 2 to 29% by weight of the total polymer; wherein said polymer is substantially free of monomers containing acetoacetoxy moieties.

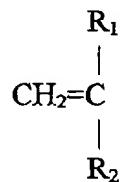

17. (Twice Amended) A two container kit for polishing nails comprising:

(a) a first container containing a nail enamel composition comprising, by weight of the total composition:

10-95% solvent, and

5-95% of a film forming polymer having a glass transition temperature in the range of 5 to 90° C. obtained by polymerizing at least two different types of monomers wherein one monomer is

a nonpolar ethylenically unsaturated monomer and the other monomer is a polar monomer of the formula:

wherein R<sub>1</sub> is H, or a C<sub>1-30</sub> straight or branched chain alkyl, aryl, or aralkyl; and R<sub>2</sub> is COOM

wherein M is H; (CHR<sub>1</sub>)<sub>n</sub>OH; (CH<sub>2</sub>CH<sub>2</sub>O)<sub>n</sub>H; (CH<sub>2</sub>)<sub>n</sub>NR<sub>1</sub>; (CHR<sub>1</sub>CONR<sub>1</sub>H) where n is 1-100,

and wherein the polar monomer is present at about 2 to 29% by weight of the total polymer;

wherein said polymer is substantially free of monomers containing acetoacetoxy moieties; and

(b) a second container containing a nail enamel topcoat composition comprising, by weight of the total topcoat composition:

1-99% solvent, and

1-99% of a film forming polymer.

cont.

19. (Twice Amended) A method for polishing the nails comprising:

(a) applying to the nails a first composition comprising, by weight of the total composition:

10-95% solvent, and

*B3*  
5-95% of a film forming polymer having a glass transition temperature in the range of 5 to 90°C. obtained by polymerizing at least two different types of monomers wherein one monomer is a nonpolar ethylenically unsaturated monomer and the other monomer is a polar monomer of the formula:
